	1. Human reproduction involves the fusion of:
	a. Egg and sperm cells
	b. Red and white blood cells
	c. Liver and kidney cells
	d. Nerve and muscle cells
	2. The reproductive cells in males are called:
	a. Uterus
	b. Eggs
	c. Ova
	d. Sperm
;	3. The reproductive cells in females are called:
	a. Sperm
	b. Ova
	c. Eggs
	d. Ovaries
	4. The process by which a sperm fertilizes an egg is called:
	a. Ovulation
	b. Fertilization
	c. Menstruation
	d. Implantation
	5. Where does fertilization usually occur in the female reproductive system?
	a. Ovaries
	b. Uterus
	c. Fallopian tubes
	d. Cervix
	6. Which is a male reproductive organ?
	a. Ovary
	b. Testis
	c. Uterus
	d. Cervix
	7. Which female organ provides a protective environment for a developing fetus?
	a. Ovary
	b. Uterus
	c. Fallopian tubes
	d. Vagina

8. The release of a mature egg from an ovary is known as:

a. Ovulation	
b. Fertilization	
c. Menstruation	
d. Implantation	
9. What is the function of the placenta?	
a. To provide nutrition to the baby	
b. To remove waste from the baby	
c. To exchange oxygen and carbon dioxide	
d. All of the above	
10. Which is a sexually transmitted infection (STI)?	
a. Diabetes	
b. HIV/AIDS	
c. Asthma	
d. Malaria	
11. The process of giving birth is called:	
a. Ovulation	
b. Menstruation	
c. Fertilization	
d. Delivery	
12. An embryo develops into a fetus after how many weeks of pregnancy?	
a. 4 weeks	
b. 8 weeks	
c. 12 weeks	
d. 16 weeks	
13. Which of the following is an external reproductive structure of the male?	
a. Ovary	
b. Uterus	
c. Penis	
d. Fallopian tube	
14. Which hormone is responsible for the development of female secondary sexual characteristics?	
a. Estrogen	
b. Testosterone	
c. Progesterone	
d. Insulin	
15. The shedding of the uterine lining is known as:	
a. Ovulation	
b. Fertilization	
c. Menstruation	
d. Implantation	

#### 16. Where does the fertilized egg implant and develop into a baby?

- a. Ovary
- b. Uterus
- c. Fallopian tube
- d. Cervix

# 17. Which of the following is a female reproductive organ?

- a. Testis
- b. Ovary
- c. Prostate gland
- d. Penis

### 18. Which of the following is not a function of the male reproductive system?

- a. Production of sperm
- b. Transportation of sperm
- c. Protection of testes
- d. Production of eggs

#### 19. What is the purpose of the menstrual cycle in females?

- a. To prepare the body for pregnancy
- b. To remove waste from the body
- c. To regulate body temperature
- d. To provide nutrients to the baby

## 20. What is the last stage of human reproduction?

- a. Ovulation
- b. Fertilization
- c. Implantation
- d. Delivery
